FEATURES source repeat repeat repeat repeat repeat repeat repeat	AUTHORS TITLE JOURNAL REFERENCE AUTHORS TITLE JOURNAL COMMENT
This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, sequence from more than one subcione; and the assembly was confirmed by restriction digest. MAPPING INPONMATION: The sequence of this clone was established as part of a maping and sequencing collaboration between the MRBRI Chromosome 7 Mapping Project and the Washington University Genome Sequencing Center For additional information about the map position of this sequence, seremenhyriningov SOURCE INPONMATION: This clone is from the first release of the human BAC library. The library contains cloned DNA from a human male fibroblast cell line 93.785K. For references see: Shizuya et al., Proc. MRLI, Acad. Sci. VECTOR: PBELO Selection: chloramphenicol NEIGHBORING SEQUENCE INFORMATION: Actual start of this clone is at base position 1 of H_BGO16304. actual end is at 156214 of H_RGO16304. The orientation of this clone is unknown. This clone contains STS SWSS2784 (NID:91113580) and SWSS893 (NID:9454733). (NID:945473). This clone contains STS SWSS2784 (NID:91113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:91113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:91113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:91113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:91113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:91113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:91113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:91113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:9113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:9113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:9113580) and SWSS893 (NID:945473). This clone contains STS SWSS2784 (NID:9113580) and SWSS893 (NID:945473). This clone con	Gattung, S. and Maggi, L. The sequence of H. sapiens BAC clone RG016J04 Unpublished (1997) 2 (bases 1 to 156214) Waterston, R. Direct Submission Submitted (09-MAY-1997) Genome Sequencing Center Department of Genetics, Washington University St. Louis, MO 63108, USA http://genome.wustl.edu/gsc e-mail: sapiens@watson.wustl.edu NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.

It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB

                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (bases 1 to 172915)
